## COMP2322 HW4 JIANG GUANLIN 21093962D

## 1) Answer:

00 000000 through 0 00 111111

010 00000 through 1 010 11111

011 00000 through 2 011 11111

10 000000 through 2 10 111111

11 000000 through 3 11 111111

The number of addresses for interface 0:  $2^6 = 64$ The number of addresses for interface 1:  $2^5 = 32$ The number of addresses for interface 2:  $2^6 + 2^5 = 96$ The number of addresses for interface 3:  $2^6 = 64$ 

## 2) Answer:

MP3: 3 Mbytes =  $3 \times 10^6$  bytes each datagram without header: 1500 - 20 - 20 = 1460 bytes number of datagrams =  $(3 \times 10^6) / 1460 = 2054.7945205479 = 2055$ MTU = 1500 bytes Final datagram =  $1460 \times 0.7945205479 + 40 = 1160 + 40 = 1200$ 

The answer will be 1200 datagrams

## 3) Answer:
